

Sclerocactus schlesseri* Heil & Welsh*SCHLESSER PINCUSHION****FAMILY:** Cactaceae, the cactus family.**SYNONYMS:** *Sclerocactus spinosior* var. *schlesseri*
Sclerocactus blainei (?)
Sclerocactus spinosior ssp. *blainei* (?)**STATUS:**

USFWS/ESA: species of concern. STATE OF NEVADA: harvest regulated. BLM: Special Status Species in Nevada. USFS: none. NNNPS: watch list.

Heritage Program SENSITIVE LIST, ranks: G1Q S1**POPULATION CENSUS:** 7 occurrences mapped at 1.0 km (0.6 mi) separation, OR 13 occurrences mapped at 0.16 km (0.1 mi) separation; total estimated individuals 211, total estimated area 54.2 ha (134 ac). **TREND:** unknown.**IMPACTS AND MAJOR THREATS:** Curtailment or destruction of soil crust and vegetation cover by recreational use, trampling by livestock or feral animals, off-road vehicle use, etc. Also vulnerable to horticultural and hobby collection, some commercial or residential development, mineral exploration and development.**INVENTORY EFFORT:** Extensive surveys have been conducted, but further potential habitat likely remains unexamined in Nevada. Most recent entered survey 1993, average year of last survey 1992.**Years since last entered survey** (percent of mapped records at various survey ages): **6-10 yrs:** 92.3%; **11-20 yrs:** 7.7%.**LAND MANAGEMENT** in decreasing predominance: U. S. Bureau of Land Management, Nevada state lands, private lands.**RANGE:** Lincoln County, Nevada; also in UT (?). Possible or probable Nevada endemic. Maximum range dimension 7.9 km (4.9 mi) excluding most disjunct record.**ELEVATIONS RECORDED (NEVADA):** 4760-5145 feet (1451-1568 meters).**HABITAT:** Open, stable or stabilized, gravelly, sandy silt or silty clay soils derived from somewhat ashy and/or gypsiferous lacustrine sediments, on mesic microsites created and/or maintained by gentle north to east aspects, dense shrub and/or grass canopies, high clay and silt content of the soil, and/or cryptobiotic soil crusts, usually associated with such soil crusts in the shadscale zone with *Atriplex confertifolia*, *Gutierrezia sarothrae*, *Ericameria viscidiflora puberula*, *Krascheninnikovia lanata*, *Pleuraphis jamesii*, *Mentzelia albicaulis*, *Mimulus parryi*, etc.**PHENOLOGY:** flowering late-spring. Range of most frequent survey months: May-June.**LIFE-FORM AND HABIT:** small cactus.**DESCRIPTION:** A spiny succulent with a more-or-less oval stem, 3-14 cm tall. Flowers are bright pink and funnel-shaped.**PHOTOGRAPHS:** Morefield (1994); Nevada Natural Heritage Program images web page (1998-present), slide collection (1986-present), and files.**ILLUSTRATIONS:** none known.**SPECIFIC REFERENCES:**

NEVADA RARE PLANT ATLAS

INDEX TO MAPS AND FACT SHEETS (8 August 2001)

This index lists all plant taxa on the Nevada Natural Heritage Program's at-risk and watch lists, whether or not included in the current Nevada Rare Plant Atlas. Atlas fact sheets and maps are available and linked for over 80% of these taxa. PLEASE NOTE THAT INFORMATION FOR SOME SPECIES MAY BE INCOMPLETE OR OUT OF DATE. Please read the atlas text sections for further information on the sources and limitations of the data represented on the maps and fact sheets, and for general references cited only in brief in the fact sheets. Fact sheets are saved in PDF format and require the free Adobe® Acrobat® Reader plug-in if not already installed on your system. Images, when available as links from our images page, are indicated with a link to that page, following which you must scroll manually to the species of interest. Updated maps and fact sheets will be generated and posted as time and resources permit, as the data comprising them are constantly being generated and updated.

Map Printing and Display: Due to storage limitations, the map images linked to this web page are not reproduced at their original printed resolution (600 dpi in 8.5x11 inch format). They are instead produced at 105 dpi (dots-per-inch) resolution, which results in grainy but acceptably readable output when printed or displayed. When you click on a map link, the first image that displays is formatted for best printing results, even though the screen display may appear degraded. To best approximate an original printed version: change the page set-up or format in your browser to eliminate all headers and footers and change all margins to their smallest possible value, then print pages 1 to 1 of this version. Recent versions of MS Internet Explorer or Netscape browsers printing to laserjet printers should work well. If you wish to view the map in its best display quality on your screen, simply click anywhere in the first map image and you will receive a second image at maximum available resolution.

	<u>Scientific Name</u>	<u>Common Name</u>
